Expectations

Gordon Olson Middle School

Social Studies

This year in 6th grade social studies students will be learning a variety of different concepts based on the two major areas of the world that we are studying. The first region that we will be studying this year will be the United States and Canada. Students will learn about the different regions of the United States along with the different provinces of Canada. Students will also be learning different cultural, economic, and geographical information from these two areas. The second region that we will be studying this year is Latin America. Students will again be looking at cultural, economic, and geographic issues in Latin America. 6th grade students will also be looking at conflicts the United States has participated in.

Culture, Economy,
Geography

Science

Students in the 6th grade science will begin with a review of the scientific method. Under the branch of physical science, we will investigate the physical and chemical properties of matter, including atoms and elements. Under the branch of life science, we will identify the features of living things, the organization of living things and the kingdoms of simple organisms that include bacteria and protozoa. Finally we will take a look at earth science. We will cover plate tectonics, weathering and erosion, and climate and weather.

Science is cool
